FORMAL NOTICE OF LIABILITY AND DEMAND FOR CEASE AND DESIST

TO:
The Chief Executive
Invercargill City Council
101 Esk Street
Invercargill 9810

AND TO:
The Commissioner of Police
New Zealand Police
National Headquarters
P O Box 349
Wellington 6140

AND TO:
The Minister for Infrastructure / Minister of Justice / Minister of Health
Parliament Buildings
Wellington 6160

DATE: 4 June 2026
SUBJECT: Systemic Breach of Law, Treason, Biological Trespass, Crimes Against Humanity, and Misuse of Public and National Infrastructure

1. MISAPPROPRIATION OF PUBLIC FUNDS AND BETRAYAL OF SOVEREIGNTY

I formally allege a gross breach of public trust, fiduciary duty, and national sovereignty. In or around mid-2020, shortly following the commencement of national lockdowns, and formalised in subsequent years, a contract valued at approximately $1.1 billion NZD was entered into with Lockheed Martin Corporation — the world's largest manufacturer and supplier of military technology and weaponry. This contract is set to run for 19 years.

This funding comes directly from New Zealand taxpayer money, allocated through government departments and public budgets. Despite this, approximately 99% of the New Zealand public remains completely unaware of the existence of this deal, the amount of public funds involved, the length of the agreement, or the identity of the contractor. Lockheed Martin is not a civilian infrastructure provider; its core business is the development and production of military systems, surveillance technology, and weapons, and it is ultimately subject to the laws and direction of the United States government.

Even if government ministers claim to have "approved" this arrangement, this does not legitimise it. Handing control of critical national positioning, timing, and surveillance infrastructure to a foreign military-linked entity for almost two decades — in secret, without public debate or consent — constitutes a betrayal of national trust and an act of treasonous nature. It places New Zealand's security, data, and the well-being of its citizens under the influence of a foreign power, rather than serving the interests of the people. This is not

legitimate governance; it is the unlawful transfer of sovereignty and a gross misuse of public funds, in violation of the Local Government Act 2002, Public Finance Act 1989, Crimes Act 1961, and fundamental constitutional principles.

2. TRUE PURPOSE OF SOUTHPAN

The South Positioning Augmentation Network (SouthPAN) is represented to the public as a tool for improving general navigation and aviation safety. However, it delivers precision down to 10 centimetres — a level of accuracy entirely unnecessary for ordinary road use, agriculture, or standard civilian services. Such precision is a defining requirement only for military targeting, high-resolution surveillance, and the microsecond-level synchronisation of sensors and directed energy systems.

I further allege that the SouthPAN satellite system has the technical capability to operate, coordinate, and enable the full functions of this integrated infrastructure across the entire landmass and territorial waters of New Zealand, not just in limited local areas. This allows nationwide coverage and centralised control from space, independent of ground-based communications alone.

I assert SouthPAN serves as the critical geospatial and timing backbone of the broader integrated infrastructure, enabling:

- Continuous, high-precision tracking of individuals, vehicles, and devices anywhere in New Zealand;

- Exact alignment and coordination of electromagnetic fields, sensors, and transmission systems across wide areas;

- Remote reconfiguration and activation of hidden functions without public knowledge or local oversight.

The public has been systematically misled regarding its true capabilities, scope, and risks.

3. COORDINATED BIOLOGICAL AND TECHNOLOGICAL ENCLOSURE

This rollout was no coincidence — it occurred precisely during the COVID-19 period. At the same time this infrastructure was being put in place, the public was subjected to unprecedented pressure to accept medical interventions which I allege, along with other environmental sources, introduced synthetic nanoparticles and advanced engineered materials into the population. These substances are not primarily medicinal; they are designed to increase biological conductivity, enable interaction with electromagnetic fields, and allow the human body to interface directly with the surrounding technological grid.

This creates a fully integrated system: external infrastructure combined with internal biological modification, deployed simultaneously and without full disclosure, independent long-term safety testing, or genuine informed consent. This violates fundamental bodily autonomy and the right to integrity of the person, protected under common law and international human rights law.

4. UNAUTHORISED DEPLOYMENT OF HARMFUL TECHNOLOGIES AND SUBSTANCES

I place on record that the infrastructure deployed throughout residential areas is being used for purposes far beyond any stated function, including:

- Weather modification and atmospheric manipulation using electromagnetic systems, altering natural conditions without environmental assessment, public notification, or regulatory approval;

- Release of undisclosed materials, including smart dust (micro-electromechanical systems), synthetic polymers, and chemical additives, designed to enhance detectability, conductivity, and interaction with biological tissue;

- Introduction of biologically engineered organisms and synthetic agents into the environment and water supply, with no independent verification of long-term health or ecological impacts.

I further specifically allege that the new streetlight nodes installed across southern Invercargill contain unauthorised phased-array transmitters operating in the 2.4 GHz band and other frequency ranges. This technology is not required for basic lighting or standard public communications; it enables precise signal steering, area-wide synchronisation, and the formation of controlled electromagnetic fields. Operation of such transmitters without proper licensing, disclosure of power levels, and proof of compliance with safety standards is a breach of the Radio Spectrum Management Act 2005 and associated regulations.

These actions constitute environmental contamination and biological trespass, contrary to the Resource Management Act 1991, Hazardous Substances and New Organisms Act 1996, and fundamental principles of natural justice.

5. OBSERVATION OF COMBINED FIELD EFFECT

In southern Invercargill, I have observed a consistent environmental effect consistent with the presence of a unified electromagnetic field covering the entire area. This manifests as a distinct layer or “dome” overhead, altering light reflection, atmospheric clarity, and general atmosphere compared to areas outside this zone.

This matches the expected effect of a fully synchronised network: when all active nodes operate at identical frequencies and precisely timed pulses — coordinated via SouthPAN —

their signals combine and reinforce one another to form a continuous, area-wide field, rather than remaining isolated near individual devices.

In direct contrast, identical physical streetlight hardware exists in parts of northern Invercargill where the lighting function operates normally but the network transmission capabilities appear inactive. No such unified field, altered atmosphere, or associated changes in mood and activity are observed there. This confirms the system has two distinct operating modes: basic lighting only, and full active transmission mode.

6. SYSTEMIC DECEPTION AND FAILURE TO DISCLOSE

The entire framework known as the Fourth Industrial Revolution — which forms the conceptual and technical basis of this integrated infrastructure — has never been properly explained, disclosed, or debated by the New Zealand public. The vast majority of citizens remain completely unaware of its existence, let alone its true scope, capabilities, or intended impacts.

Furthermore, the deployment of associated infrastructure — including 5G systems, smart sensor networks, and the streetlight nodes across Invercargill — has been carried out in a manner that is effectively covert. No public consultation whatsoever was held before 5G or related systems were installed, and to this day the full details, risks, and true functions have never been disclosed to the public. These systems were presented as simple improvements to lighting, internet access, or navigation, with no mention of their true dual-use nature, their ability to emit structured electromagnetic frequencies, their role in precision tracking, or their capacity to interact with biological systems.

Scanning of the local radio spectrum confirms the presence of multiple active Internet of Things (IoT) and network nodes (identified as “2DEG”, “IoT”, and similar) associated with the streetlight network in southern Invercargill. These are absent or show only minimal activity in northern areas fitted with identical hardware.

This system has been progressively deployed and operated for approximately five to six years, yet no meaningful public consultation was held, no full independent safety assessments were published, and no choice was given to communities regarding exposure. This deliberate suppression of information and misleading of the public is not an administrative oversight — it is a necessary component of operating without consent.

7. RUSHED LEGISLATION TO JUSTIFY UNLAWFUL ACTIVITY

I further note that in recent days, legislation has been rapidly rushed through Parliament with minimal debate or public input, granting New Zealand Police and other agencies broad new powers to access, collect, store, and share biometric data without requiring a warrant, independent oversight, or the consent of the individual.

This timing is highly suspicious and appears directly linked to the increasing scrutiny being applied to these systems, including formal requests for information and legal notices such as this. It follows the pattern of retrospective legalisation: attempting to pass new laws after the fact in an effort to justify activities that were previously unlawful, and to block access to information that would expose the true nature of the network.

It is a fundamental principle of law that you cannot pass a law today to make illegal actions from yesterday become legal, especially when those actions violate fundamental human rights and international law. This rushed legislation does not validate any prior unlawful collection or use of biometric or personal data, nor does it override the prohibitions on crimes against humanity and non-consensual experimentation.

8. NON-CONSENSUAL HUMAN EXPERIMENTATION – VIOLATION OF THE NUREMBERG CODE

The entire program — from procurement of military-grade technology, to deployment of the network, to the introduction of materials designed to interface with it — constitutes unlawful human experimentation in direct violation of the Nuremberg Code. This is recognised as a peremptory norm of international law, binding on all states and individuals, which states clearly that “the voluntary consent of the human subject is absolutely essential”. No such consent was sought, given, or possible.

This also violates Section 10 of the New Zealand Bill of Rights Act 1990, which guarantees every person the right not to be subjected to medical or scientific experimentation without their consent, as well as the fundamental right to security of person and bodily integrity.

9. USE OF DIRECTED ENERGY TECHNOLOGIES AND CRIMES AGAINST HUMANITY

I formally allege this integrated infrastructure is utilised to emit structured, pulsed electromagnetic fields capable of affecting human mood, cognition, energy levels, and behaviour — as evidenced by the marked difference in community activity and well-being between southern and northern Invercargill.

I further specifically allege that directed energy weapons and systems have been deployed and used from this integrated network, including emissions originating from the sky via SouthPAN satellite-linked systems and from ground-based infrastructure such as the streetlight nodes and associated towers. These systems are capable of delivering focused energy and frequency effects over wide areas or against specific targets, enabled and coordinated by the nationwide reach of the SouthPAN constellation.

Under the Rome Statute of the International Criminal Court, such actions qualify as crimes against humanity, specifically including:

- Subjecting populations to medical or scientific experimentation without consent;

- Intentionally inflicting serious bodily or mental harm;

- Acts intended to control, oppress, or alter the state of a civilian population;

- The use of weapons or methods of warfare that cause unnecessary suffering or are inherently indiscriminate.

These are offences of universal jurisdiction, meaning no claim of national security, public health, commercial confidentiality, subsequent domestic legislation, or government approval can provide legal immunity. Individual criminal responsibility applies to all persons involved, regardless of official position or instructions received.

10. UNLAWFUL DATA EXPLOITATION AND UNDERMINING OF SOVEREIGNTY

Evidence confirms that data collected through this network — including precise geolocation, environmental, biological, behavioural, and now biometric information — is systematically transmitted, stored, and processed outside New Zealand's jurisdiction, including in the United States and other allied nations.

This violates the Privacy Act 2020, undermines New Zealand's national sovereignty, and places the personal and biological data of New Zealand citizens under the control of foreign military and corporate interests, without any legal right or proper oversight.

11. ARTIFICIAL INTELLIGENCE AND DATA PROCESSING SYSTEMS

I further allege this integrated "Sky Net" and smart city infrastructure operates using advanced artificial intelligence and automated decision-making systems designed to collect, correlate, and act on vast volumes of data in real time.

It is a matter of public record that Palantir Technologies — a US-based firm specialising in large-scale data integration, surveillance analytics, and military-linked AI — has held ongoing contracts with New Zealand government agencies, including the Defence Force, GCSB, and SIS, dating back to at least 2012. The government has confirmed this partnership remains active, though full details of its current scope, use, and integration with domestic infrastructure have never been disclosed.

I reasonably suspect that systems like Palantir's analytics platforms are being used or adapted to process the location, sensor, biometric, and behavioural data generated by this network, given its technical capabilities, the existing contractual relationship, and the lack of transparency around data handling. This would enable continuous pattern-recognition, predictive profiling, and automated coordination of the network's functions across the entire country.

EVIDENCE AND LEGAL STANDING

I hold sufficient, verified evidence to prove each of these allegations before any competent national or international tribunal. This evidence is preserved, independently verifiable, and capable of establishing facts to the highest legal standard. I am not required to disclose its full nature or location at this preliminary stage, but confirm it will be formally presented and submitted for examination if a full and proper response is not received.

FORMAL DEMANDS

Pursuant to my legal rights and the gravity of the matters alleged, I formally demand:

1. Immediate Cease and Desist: All operations related to frequency transmission, signal pulsing, precision tracking, biological interaction, weather modification, cross-border data collection or sharing, biometric data collection, AI-driven profiling, and the use of directed energy systems from any source — ground or SouthPAN satellite-linked — directed against my person, household, or immediate property must cease immediately;

2. Full Transparency and Disclosure: Production of complete, unredacted documentation including:

- All contracts, agreements, and amendments with Lockheed Martin Corporation, Palantir Technologies, and any related subsidiaries or partners;

- Full technical specifications of SouthPAN, its satellite constellation, coverage capabilities, streetlight nodes, ground stations, and all associated infrastructure, including exact frequency bands, power levels, modulation patterns, transmission protocols, and any capability for directed energy output or biometric sensing across New Zealand;

- All safety assessments, risk reports, and research regarding the effects of these emissions on human health, cognition, and behaviour;

- Full details of all data collected, including biometric data, how it is stored, who has access, to whom it is transmitted, and what analytics or AI systems are used to process it;

3. Independent Audit: A full, public technical, environmental, and health audit conducted by qualified experts with no financial, contractual, or institutional ties to the government, Lockheed Martin, Palantir, or any involved contractor;

4. Written Confirmation: A formal written undertaking confirming that no further collection, processing, or sharing of my personal, biological, biometric, or location data will take place without my explicit, informed, written consent.

FINAL NOTICE

I make clear that no domestic law, executive order, rushed legislative change, claim of state necessity, or commercial confidentiality provision can override the peremptory norms of international law prohibiting crimes against humanity, war crimes, and non-consensual human experimentation.

Failure to provide a full, substantive, and compliant response within 72 hours of receipt will result in the immediate escalation of this matter, including the formal submission of evidence and complaint to the International Criminal Court, the United Nations Human Rights Council, the World Health Organization, and independent international legal and media bodies.

SIGNED:

NAME: Sovereign Citizen Greg
